

SLICKY STICKY® - EASY AS 1-2-3

SLICKY STICKY® PROVIDES SOIL EROSION PROTECTION

Slicky Sticky® provides soil erosion protection at application rates as low as 3 pounds per acre. However, during an independent study by a nationally recognized erosion control laboratory, tests showed that 10 pounds per acre provided significantly better results. Unlike conventional tackifiers, Slicky Sticky® works in the soil structure increasing water penetration, reducing water runoff, and tying soil particles together. Sediment loss on a job site is minimized when using Slicky Sticky®.

SLICKY STICKY® IS THE IDEAL ADDITIVE TO PREVENT CLOGGING.

Any mulch slurry is easier to pump and less likely to clog when using Slicky Sticky® in the mix. A few ounces of Slicky Sticky® per 100 gallons makes any mulch slurry slicker and reduces the friction loss in long hoses. With Slicky Sticky®, more mulch can be loaded in any machine, so at the end of the day, more mulch can be applied with fewer tank loads. And, longer hoses can be used because clogging is less likely. Live hose reels with hard hose are also less likely to clog when using Slicky Sticky®.

SLICKY STICKY® THE HYDRO-SPRIGGING COMPANION

Slicky Sticky® is used with hydro-sprigging to increase the survivability of the bare root plant material. Slicky Sticky® protects bare roots with a moisture holding coating, resulting in higher sprig survival. More living sprigs means quicker coverage and lowers sprig costs. The slipperiness also enhances the flow of a sprig slurry through hoses, helping to prevent clogging.

SLICKY STICKY® packs a lot of power in a small package. A 15 pound jug of Slicky Sticky® may be enough product for a typical work day. Under normal circumstances, 2 to 4 ounces should be used per 100 gallons of slurry. Slicky Sticky® is easy to pour right out of the jug. No more torn bags. No Spills. No more slippery machine decks. Clean work areas prevent dangerous slippery spots caused by most tackifiers.

Slicky Sticky® is environmentally safe and E.P.A. exempt. Similar products have been used in agriculture for many years. The product is totally biodegradable in 3 to 6 months. Slicky Sticky® - A New Dimension.
